Application No.: 10/052,889

Filed: January 18, 2002

For: ACELLULAR MATRIX GRAFTS:
PREPARATION AND USE

Customer No.: 20350

Confirmation No. 3329

Examiner: Prebilic, Paul B.

Technology Center/Art Unit: 3738

DECLARATION UNDER 37 C.F.R.
§1.132 OF DR. EMIL A. TANAGHO

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

I, Emil A. Tanagho, being duly warned that willful false statements and the like are punishable by fine or imprisonment or both (18 U.S.C. § 1001), and may jeopardize the validity of the patent application or any patent issuing thereon, state and declare as follows:

1. All statements herein made of my own knowledge are true, and statements made on information or belief are believed to be true and correct.

2. I received Bachelor of Medicine and Bachelor of Surgery MB, Ch.B. from Alexandria University, Egypt in 1952. I received a Diploma in Urology from Alexandria University, Egypt in 1955. I received a Masters Degree in Surgery from Alexandria University, Egypt, in 1957. I served at the University of California, San Francisco as an Assistant Professor of Urology from 1967 – 1970, as an Associate Professor of Urology from 1970 – 1977, and as a Professor of Urology from 1977 – present. I served as a Chairman of the Department of Urology at the School of Medicine at the University of California, San Francisco from 1977 – 1997. In addition to my academic positions, I am a practicing specialist and researcher, and have been so since 1967. A copy of my curriculum vitae and biographical sketch are attached as Exhibit A.

3. The invention of the above-referenced patent application provides for the first time an organ-specific, insoluble elastic matrix graft for repair of ureter and urethra. This matrix graft is derived from donor's ureter or urethra smooth muscle tissue, is impermeable to urine, provides a scaffold for seeding of recipient's functional ureteral and urethral cells as it forms an intact framework of collagen and elastic fibers and permits recipient's cellular and muscular tissue to localize, germinate, and grow within such framework.

4. I am a named inventor on this patent application. I have read and am familiar with the contents of this patent application. In addition, I have read the Office Action mailed February 25, 2004, the Final Office Action mailed November 4, 2004, and the Office Action mailed June 17, 2005, for the present application. It is my understanding that the Examiner believes that the present invention is obvious in light of the Bishopric reference or the Goldstein reference or the Abraham reference, further in view of the Gregory reference.

5. This declaration is provided to demonstrate that: first, the cited references does not necessarily motivate or suggest to one of skill in the art to combine the teaching of these references; second, there is no reasonable expectation of success to arrive at the present invention by combining the teaching of the cited references; and third, the acellular matrix graft of the present invention has surprising properties that are not expected from combined reading of the cited references.

I. There Is No Motivation to Combine

6. The processes disclosed in the primary references (Bishopric, Goldstein, and Abraham) relate to an acellular collagenous matrix. The secondary reference (Gregory) relates

to elastin extraction and purification. Because of the distinct results achieved by the processes, one of skill in the art would not be motivated to combine these references.

7. The pending claims of this application are directed to a collagen/elastin matrix derived from ureter or urethra smooth muscles. Under a light microscope, collagen and elastin form a matrix of interwoven fibers. Under an electron microscope, both collagen and elastin individually form their own fibrous matrix. These two proteins have distinct characteristics and thus contribute to different aspects of the collagen/elastin matrix: collagen imparts strength and elastin imparts flexibility. Collagen, a fibrous protein consisting of a combination of types I, II, III, *etc.*, is readily solubilized by conditions that do not appreciably solubilize elastin. When present within a matrix, collagen derives its strength to a large extent from the length of the fibers. Furuto *et al.* (made of record with Applicants' response of May 3, 2005, as Exhibit 2) describe a preferred method of solubilizing collagens, where selective extraction of collagen involves using salt and diluted acid (*see, e.g.*, pages 43-44).

8. On the other hand, elastin and its purification procedures are described in the review articles by Rosenbloom (made of record with Applicants' response of May 3, 2005, as Exhibit 3) and Soskel *et al.* (made of record with Applicants' response of May 3, 2005, as Exhibit 4). According to Rosenbloom, the fibers of elastin are called elastic fibers, which are 90% elastin and 10% microfibrillar components. Soskel *et al.* also describe elastin as a "heavily cross-linked meshwork, perhaps best described as a fiber rather than as a protein. It is an infinitely large polymer" (*see, e.g.*, page 196). The flexibility of elastin is due to its extensive crosslinking between polypeptide strands.

9. In the present application, the claimed matrix is a collagen/elastin matrix that maintains its native strength and flexibility. This means that the fiber lengths and cross-linking have not been chemically altered to weaken the integrity of the matrix. The matrix is also intact in that it can retain urine and does not have rips or tears through which urine can pass.

10. The Examiner cited three primary references to form the basis of the obviousness rejection: the Bishopric, Goldstein, and Abraham references. Bishopric *et al.* describe a generic method for producing a collagen/elastin matrix from tissues, where the descriptions generally relate to body tissues, with focus on vascular tissues such as heart valves. This is the most apparent in the examples of this reference. Similarly, the Goldstein reference describes bioprosthesis derived from tissues following a decellularizing process involving enzymatic treatment. The specific tissue types discussed in this reference are skin and heart

Declaration under 37 CFR 1.132 of Dr. Emil A. Tanagho

valves, although the author does not limit his invention to these tissue types. The Abraham reference teaches the production of an acellular collagenous matrix using a chemical method. Again, Abraham *et al.* refer to the tissue types either in a general sense or naming specific types that do not include ureter or urethra.

11. The Examiner apparently took the position that this missing limitation, *i.e.*, deriving a collagen/elastin matrix from ureter or urethra smooth muscle tissue, can be found in the Gregory reference. The Gregory reference teaches methods for elastin extraction and purification from various sources, including ureter. This reference, however, describes its matrix as an "elastin matrix" rather than an "collagen/elastin matrix." As discussed above, elastin is *per se* a "matrix." There is no indication that the methods disclosed by Gregory are preserving the natural collagen/elastin matrix present in tissues such as in the ureter or urethra smooth muscles. For instance, the extraction conditions described in Gregory (column 5, lines 36-55) makes no allowance for preserving the collagen or microfibrillary components. Gregory describes the conventional methods for elastin extraction/purification, which call for acid and base treatment and/or use of heat. Under these conditions, collagen fibers will be severely damaged, if not completely solubilized. In fact, it is explicitly stated in EXAMPLE 3 (column 11, lines 46-58) that the elastin-based biomaterials produced according to the method taught therein "appear translucent, pearly white in color and collapsed when removed from water *indicating the absence of collagen* and other structurally supportive proteins" (emphasis added).

12. Because of the difference in purpose and in result of the methods taught by Bishopric, Goldstein, or Abraham and by Gregory, a person of ordinary skill in the art would not find any suggestion or motivation from these references to combine the limitations found in these references. As stated above, Gregory teaches extraction of elastin in a process far too harsh to preserve the intact collagen/elastin scaffolding. An artisan who sets out to prepare a bioprosthesis described by Bishopric, Goldstein, or Abraham would find no reason, either in the references or elsewhere, to combine the disclosure of Gregory, as the latter teaches the disruption of the collagenous network and would therefore defeat the purpose of preparing a implantable material having required structural integrity.

II. There Is No Reasonable Expectation of Success

13. Even if an artisan were somehow inspired to combine the teaching of Bishopric, Goldstein, or Abraham with the teaching of Gregory, and attempted to produce a collagen/elastin matrix derived from tissues other than those actually experimented by Bishopric,

Goldstein, and Abraham, there would be no reasonable expectation of success in achieving such a matrix with the properties as defined in the present application. This is because there exists significant difference in properties between ureter/urethra smooth muscle and other tissue types used in the methods described by Bishopric, Goldstein, or Abraham.

14. As far as the applicability of the disclosed methods is concerned, Bishopric, Goldstein, and Abraham appear to encompass a whole universe of tissue types. Yet, besides the certain tissue types that have been shown in the examples, these three references do not adequately address the feasibility of their methods in other tissues, particular those with special properties due to their distinct structure and functionality (*e.g.*, the properties of flexibility and water impermeability of the ureter and urethra) and the ability to serve as an organ-specific scaffold for a recipient's re-growth of the same organ's cellular content and muscular tissue. There is a large number of different types of tissues present in a human body, and that the tissues differ drastically in terms of strength, elasticity, and porosity of the cellular matrix. For instance, heart valves are a type of highly specialized tissue in that the tissue is nearly acellular except for a thin external layer of cells that can be readily removed by a variety of treatment methods to achieve a thick, dense, and relatively stiff matrix. In contrast, the intact matrix of smooth muscles such as that forms ureter or urethra provides a waterproof sheath with much higher flexibility. The matrix taught by Bishopric, Goldstein, or Abraham cannot substitute the matrix provided by the present disclosure, because the matrix of the present invention provides some important features that cannot be predicted or expected from the teaching of the cited references: first, the matrix of the present invention must be strong enough retain fluids without leakage, even when under pressure; second, the matrix must be flexible enough to accommodate changing fluid pressure; third, the matrix can be sutured without compromising its internal integrity or tearing when under pressure; and fourth, the matrix must be able to sustain growth of multiple cell types (muscle, epithelial, mucosal, and nerve) necessary to restore function to the repaired organ. These important features of the claimed collagen/elastin matrix will be discussed in detail below.

III. Unexpected Properties of the Claimed Collagen/Elastin Matrix

15. The collagen/elastin matrix of the present invention has been shown, in actual testing and use, to possess extraordinary properties that cannot be gleaned from the cited references. The inventors of this application have successfully accomplished the goal of making a matrix that has preserved the native collagen/elastin scaffolding and thus maintained the desired

strength and flexibility. This matrix has no antigenicity and readily permits cell repopulation into the collagen/elastin framework. These properties of the matrix as a tissue graft have been tested in numerous studies and the graft has consistently performed well. This is evidenced by Sievert *et al.* (made of record with Applicants' response of May 3, 2005, as Exhibit 5). Three additional publications by the present inventors provide further details in the surprisingly outstanding quality of the ureter/urethra-derived collagen/elastin matrix that allowed successful graft and long term use. The performance of the matrix is particularly remarkable in terms of recellularization and pressure profile (Dahms *et al.*, *Urology* 50:818-825, 1997; Sievert *et al.*, *J. Urol.* 163:1958-1965, 2000; and Sievert *et al.*, *J. Urol.* 165:2096-2012, 2001, made of record with Applicants' response of May 3, 2005, as Exhibits 6-8, respectively).

17. Furthermore, recent effort by the present inventors using the claimed matrix graft for repairing urethra in human patients has proven highly successful. In particular, the claimed invention was used by the inventor on a human subject to correct damaged urethral tissue. More recently, others have referred to the inventor's procedure and copied successfully on patients around the world. The attached eleven (11) slides (Exhibit B) describe some aspects of the procedure. Slide 1 shows the stenosed (damaged or strictured) urethral tissue that was replaced. Slide 2 shows an x-ray of the stenosed (damaged or strictured) segment of the urethra. Slide 3 shows a chart and numbers of the patient's urine flow before the operation. Slide 4 shows a sketch of the operation. Slide 5 shows the patient's pre-operation condition. Slide 6 shows the donor's (cadaveric) urethral tissue to be grafted into the patient, which donor's tissue was treated using the same process described in this patent application. Slide 7 shows the patient's urethral tissue to be removed. Slide 8 shows the cadaveric tissue of the appropriate size that was treated using the process described in this patent application to be grafted into the patient. Slide 9 shows the sutured donor's tissue implanted into the recipient. Slide 10 shows an x-ray of the grafted urethral tissue of the healthy recipient after the operation. Slide 11 shows a chart and numbers of the healthy recipient's normal urine flow after the operation. This surgical procedure typically involves exposing the stenosed urethral segment and splitting it open ventrally. The cadaveric accularized urethra is also split open and the appropriate length and width is prepared to be used as an onlay graft over the stenosed urethral segment using 50 absorbable sutures and all the wounds are then closed in the usual manner.

18. By contrast, a matrix produced from any randomly selected tissue type, including those that have been used by Bishopric, Goldstein, and Abraham, simply cannot be expected to achieve the exceptional properties of the matrix graft of the present invention, which

Declaration under 37 CFR 1.132 of Dr. Emil A. Tanagho

are essential for the successful repair of ureter or urethra. The combined teaching by Bishopric, Goldstein, and Abraham and the teaching by Gregory, does not show or suggest use of the accellularized tissue as an organ-specific scaffold for regrow of specific organs' cellular contents and muscular tissues.

19. In summary, it is my opinion that a person of skill in the art would not be motivated to combine the teaching by Bishopric, Goldstein, and Abraham and the teaching by Gregory, particularly because Gregory's method would defeat the purpose of preserving the native collagen/elastin matrix, which Bishopric, Goldstein, and Abraham appear to achieve. There is also no reasonable expectation of success, even if one does attempt to combine the teachings. This is due to the significant difference in functions and characteristics of different tissue types. In addition, the matrix graft of the present invention has been demonstrated to possess extraordinary properties that simply cannot be expected from combining the teaching of the references cited.

20. Declarant has nothing further to say.

C. Research Support

Title: Regeneration of functional smooth muscle tissue

NIH / NIDDK RO1DK51101

Principal Investigator: Emil Tanagho, M.D. 01/01/2000-12/31/2004

The main goal of this project is to investigate the molecular mechanisms of regeneration of functional smooth muscle tissues using in vitro and in vivo models. We will also investigate the clinical trials for urethral stricture repair using organ specific acellular matrix.

This is current application for renewal.

LICENSES, CERTIFICATES, ETC.:

Medical License, California: 1967

Certified, American Board of Urology (Field: Urology): 1974

PRINCIPAL POSITIONS HELD:

1957-1959	Univ. of Alexandria, Egypt	Clinical Demonstrator of Urology
1959-1962	Univ. of Alexandria, Egypt	Lecturer in Urology
1994	(see EDUCATION)	
1964-1966	Univ. of Alexandria, Egypt	Assistant Professor of Urology
1967-1970	Univ. of California, San Francisco	Assistant Professor of Urology
1970-1972	Univ. of California, San Francisco	Associate Professor of Urology

Emil A. Tanagho, MD

1972-present	Univ. of California, San Francisco	Professor of Urology
1976-1996	Univ. of California, San Francisco	Chairman, Dept. of Urology
1995-present	Veterans Admin, Medical Ctr, SF	Attending Physician
1996-present	Univ. of California, San Francisco	Professor, Dept. of Urology

ANCILLARY POSITIONS HELD CONCURRENTLY:

1967-present	San Francisco General Hospital	Courtesy Staff
1970-	Letterman Army Medical Center	Consultant in Urology
1970-present	Oakland Naval Hospital, Oakland	Consultant in Urology
1970-present	Ross General Hospital, Ross, CA	Courtesy Staff
1970-present	Marin General Hospital, Greenbrae	Courtesy Staff
1971-present	Children's Hospital, San Francisco	Courtesy Staff
1978-present	Veterans Admin. Medical Ctr., SF	Consultant in Urology
1978-1981	U.S. Public Health, San Francisco	Consultant in Urology
1978-present	Veterans Admin. Medical Center Palo Alto, CA	Consultant in Urology

HONORS AND AWARDS: (*Prizes awarded to research fellows. Dr. Tanagho is the Principal Investigator for the following research performed in the Urology Laboratory at the University of California School of Medicine, San Francisco).

Grand Prize for exhibit: Ureteral Orifice: Its Competence and Configuration. American Urological Association meeting; Miami, FL. 1968

Honorable Mention for exhibit Anatomy and Function of the Bladder Neck. AUA meeting, Miami, FL

Grand Prize for exhibit: Ureteral Orifice: Its Competence and Configuration. Western Section, AUA meeting; Seattle, WA 1968

Second Prize in Research: Western Section, AUA meeting, San Francisco, CA 1974s

First Prize in Research: Vesicoureteral Reflux - I. AUA meeting; St. Louis, MI

*First Prize in Laboratory Research: Studies on Vesicoureteral Reflexes: Urethral Sphincteric Responses to Detrusor Stretch.

Grayson Carroll Essay contest, AUA; St. Louis, MI

*Second Prize: (Same studies as above), Western Section, AUA; San Francisco, CA

*First Prize: Feasibility of inducing micturition through stimulation of sacral nerves. Miley B. Wesson Essay competition, AUA meeting, Chicago, IL 1977

*Third Prize, Laboratory Research: Motor Innervation of the Urinary Tract Studied by Retrograde Axonal Transport of Protein.

Grayson Carroll Essay contest, AUA meeting, Washington, D.C.

Decoration of Merit awarded by the Egyptian Government for contributions in medicine and research. 1978

*Third Prize in Research: Grayson Carroll Essay contest, AUA, Washington, D.C.

H.B. Atlee Lectureship, Dalhousie University; Halifax, Nova Scotia 1979

*First Prize, Laboratory Investigation (exhibit): Sacral Micturition Center (Identified by HRP Axonal Transport). Western Section, AUA meeting, Kona /Honolulu, HI 1980

First Prize, Round Table: Potential Use of Synthetic Absorbable Mesh in Urologic Surgery. Western Section, AUA meeting, Coronado, CA 1982

First Prize, Scientific Paper: The External Urinary Sphincter Revisited. Western Urologic Forum meeting; Santa Barbara, CA

*First Prize, Laboratory Research: Hemodynamics of Erection and Clinical Implications. AUA meeting; Las Vegas, NV 1983

*First Prize, Joseph F. McCarthy Essay Contest: Neuroanatomy of Penile Erection and Iatrogenic Impotence. Western Section, AUA; Vancouver, British Columbia

Honorable Member: Urological Society of Australia 1984

Jacob K. Javits Neurosciences Award 1985

*First Prize: Western Section, AUA; Anaheim, CA: Assessment of renal viability by phosphorus-31 magnetic resonance spectroscopy.

*Third Prize, Laboratory Research: AUA; Atlanta, GA (same studies as before)

*First Prize, Jack Lapidus Essay Contest: Clinical significance of sacral and pudendal nerve anatomy. 1986

*First Prize, Joseph F. McCarthy Essay Contest: Priapism: A refined approach to diagnosis and treatment. Western Section, AUA; Seattle, WA

*Shared First Prize, Miley B. Wesson Essay Contest: Assessment of renal preservation by phosphorus-31 magnetic resonance spectroscopy: In vivo normothermic blood perfusion. Western Section, AUA, Seattle, WA

*Shared First Prize, Miley B. Wesson Essay Contest: Assessment of Clinical renal preservation by phosphorus-31 magnetic resonance spectroscopy. Western Section, AUA; Seattle, WA

Emil A. Tanagho, MD

*Shared First Prize, Miley B. Wesson Essay Contest: Mechanism of venous occlusion during canine penile erection: An anatomic demonstration. Western Section, AUA; Seattle, WA

*Second Prize, Clinical Research: Assessment of clinical renal preservation by phosphorus-31 magnetic resonance spectroscopy. AUA; New York City

*Second Prize, Jean-Francois Ginestie Essay Contest: Mechanism of penile erection.

*Alken Prize: Mechanism of penile erection.

*Second Prize, Laboratory Research: Assessment of renal viability during unilateral ureteral obstruction by phosphorus-31 magnetic resonance spectroscopy. Part I: Experimental study in rats and canines. Western Section, AUA meeting, Kona, HI 1987

*Honorable Mention, Joseph F. McCarthy Essay Contest. Cavernous vein arterialization for vasculogenic impotence: An animal model. Western Section, AUA meeting; San Francisco, CA 1988

State-of-the-Art Lecture: "Surgical Anatomy of the Penis: Clinical Implications. Presented at the Western Section, AUA, Scottsdale, AZ 1989

Honorary Membership, German Urological Society

Honorary Fellow, German Urological Association 1990

*Second Place: Interstitial Cystitis: Abnormal nonadrenergic-non-cholinergic (NANC) neurotransmission in the bladder wall. Poster Contest: Western Section, AUA, Vancouver, British Columbia 1991

Honorary Membership in All-Union Association of Urology, USSR

First Prize: Urodynamics Essay Contest: Intracellular mechanism of penile erection in monkeys. 1992

First Prize: Jack Lapides Essay Contest: Reinnervation of the rat bladder with a somatic nerve and a striated muscle flap.

First Prize: Urodynamic Essay Contest: Male urethral responses to electrostimulation and neuromuscular blockade: Correlation of regional differences with sphincteric and ejaculatory function. 1993

American Urological Association Achievement Award.

Shared First Prize, Proctor and Gamble Resident Essay Competition: The latissimus dorsi muscle as a detrusor substitute: Functional recovery after nerve division and repair. 1993

Grand Prize, Jack Lapides Essay Contest: Baba, K, Yajima, M, Carrier, S, Nagaraju, P, Morgan, DM, Akkus, E, Rehman, J, Nunes, L, Lue, TF and Tanagho, EA: Effect of testosterone on the number of NADPH-diaphorase staining nerve fibers in the rat corpus cavernosum and dorsal nerve. 1995

Honorary Membership: Romanian Academy of Science, Buchaert, Romania 1996

Ramon Gutierrez Award, American Urological Association Annual Meeting, Atlanta, GA 2000

SIU/Yamanouchi Award 2000: Presented at the SIU 25th Congress, Singapore, October – November 2000.

MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS:

1952-present	Egyptian Medical Association
1965-present	Fellow, American College of Surgeons
1970-present	American Medical Association
1971-present	California Medical Association
1971-present	San Francisco Medical Society
1972-present	Western Section, American Urological Association, Inc.
1975-present	American Academy of Pediatric
1975-present	Societe Internationale d'Urologie
1975-present	American Urological Association, Inc.
1975-present	Academia Mexicana de Cirugia
1976-present	International Urodynamic Society
1976-present	California Academy of Medicine
1976-present	International Continence Society
1977-present	Society of University Urologists
1977-present	Arab American Medical Association
1978-present	University Urologic Forum
1979-present	American Association of Genito-Urinary Surgeons
1979-present	Northern California Urological Society
1979-present	Western Urologic Forum
1981-present	Society for Pediatric Urology
1981-present	Urological Research Society

Emil A. Tanagho, MD

1982-present	Fellow, International College of Surgeons, United States Section
1983-present	World Medical Association (associate member)

HONORARY MEMBERSHIP

1984-present	Urologic Society of Australasia
1987-present	Royal Society of Medicine, G.B.
1989-present	Canadian Urological Association
1989-present	German Urological Association
1990-present	All-Union Association of Urology, USSR
1992-present	Czechoslovakia Urological Society
1994-present	Urologic Society of Japan
1996-	Romanian Academy of Science

PROFESSIONAL ACTIVITY

PROFESSIONAL ORGANIZATIONAL ACTIVITIES

1993	Postgraduate Instruction Committee, Western Section, AUA
1994	Chairman, Committee on Neurophysiology, Urodynamics Society
1993	Consultant to American Urological Association International Relations Committee

SERVICE TO PROFESSIONAL PUBLICATIONS

1973-present	Urology	Consulting Editor
1982-present	Journal of Urology	Assistant Editor
1982-present	Neurourology and Urodynamics	Editorial Board
1983-present	Today's Therapeutic Trends	Editorial Advisory Board
1983-present	Urologia Internationalis	Scientific Board
1985-present	The American Physiological Society	Consulting Editor

SCIENTIFIC AND PROFESSIONAL MEETINGS AND WORKSHOPS ATTENDED (Last 20 Years) INTERNATIONAL

1977

June	Visiting Professor: University of Mainz, Mainz, Germany
July	Visiting Professor: University of Alexandria and Univ. of Cairo, Egypt
	World Symposium for Pediatric Surgery, Barcelona, Spain
Nov	Guest Speaker: Association de Urologos de Puerto Rico, in San Juan, Puerto Rico

1978

June	Guest Speaker: International Urodynamic Seminar, Italy
Oct	Guest Speaker: Arab American Medical Association (First Medical Symposium in the Mideast), Baghdad, Iraq, Cairo and Alexandria, Egypt

1979

June	Guest Speaker: International Congress of Urology, Paris, France
	Visiting Professor: Pugivert Institute of Urology, Barcelona, Spain
	Guest Speaker: Chilean Urologic Society, Santiago, Chile
Oct	Invited Speaker: "Atlee Lectureship Speaker, University of Dalhousie, Halifax
Nov	Guest Speaker: International Urologic Symposium, Frankfurt, Germany

1980

Feb Attended: Western Urologic Forum annual meeting, Cancun, Mexico
April Visiting Professor: University of Sherbrooke, Sherbrooke, Canada
Guest Speaker: American Gynecological Society meeting, Montreal, Canada

June Visiting Professor: King Faisal Specialist Hospital, Riyadh, Saudi Arabia
July Visiting Professor: University of Alexandria, Alexandria, Egypt
Nov Visiting Professor: University of Manitoba, Winnipeg, Canada
Dec Visiting Professor: King Abdul Azia University, Jeddah, Saudi Arabia

1981

April Guest Speaker: Edmonton Society of Obstetricians and Gynaecologists, Edmonton, Alberta, Canada
May Guest Speaker: Annual Meeting of the Mexican Urological Society, Mexico, Mexico
June Pan American Andrology Society meeting, Cairo, Egypt
Oct Guest of Honor: Labat Laboratories, BPH Symposium, Paris, France
French Urological Society, Paris, France

1982

June Belgrade Congress of Urology (Yugoslavia)
Sept XIX Congress, Society Internationale d'Urologie (San Francisco)
(President; Papers, Posters)

1983

Sept Guest Speaker: 2nd Joint Meeting, International Urodynamics and Continence Societies (Aachen, Federal Republic of Germany)
Guest Speaker: 3rd International Congress of Pediatric Urology (Florence, Italy)
Oct Guest Speaker: XVII Congress of the American Confederation of Urology (Cartagena, Columbia)
Nov Guest Speaker: IV Overseas Symposium, Arab American Medical Association (Kuwait)

1984

March Invited Lecturer: Pan Pacific Surgical Association (Sydney, Australia)
April Invited Lecturer: Urologic Society of Australasia (Melbourne, Australia)
June Invited Lecturer: International Symposium – Practical Aspects of Urinary Incontinence (Nijmegen, The Netherlands)

1985

June International Society of Urology, Vienna, Austria
Symposium Internationale d'Urologie (Willy Gregoir), Brussels, Belgium
Pediatric Urology Conference, Florence, Italy

1986

March Visiting Professor: University of Amsterdam
Visiting Professor: Le Greffon Intestinal en Urologie, Nechar Hospital, Paris, France
Nov Guest Speaker: III International Symposium on Urology (Madrid Spain)

1987

Feb Visiting Professor: Leiden, Holland

Emil A. Tanagho, MD

June Guest Speaker: 52nd Annual Belgium Urologic Society Meeting (Brussels, Belgium)
6th Annual Urologic Research Society Meeting (Dublin, Ireland)
Visiting Professor: Royal Society of Medicine, (London, England)

1988

June Visiting Professor: III International Congress on Biostimulation
III International Course in Urologic Surgery, Copanello, Catanzaro, Italy
Sept Visiting Professor: Bratislava, Czechoslovakia
Oct Societe Internationale d'Urologie, Buenos Aires, Argentina

1989

Jan Visiting Professor: Vienna School of Medicine, Vienna, Austria
Guest Speaker at the Austrian Urologic Society
Feb Visiting Professor: McGill University, Quebec, Canada
March Guest Speaker: Third International Congress in Nijmegen, The Netherlands
June Guest Speaker: Canadian Urological Association, Quebec, Canada
Guest Speaker: 21st Annual Congress of the Societe Internationale d'Urologie, Buenos Aires, Argentina
Aug Lecture: International Symposium on Andrology, Sao Paulo, Brazil
Oct Guest Speaker: Annual German Urologic Association meeting in Freiburg, Germany

1990

Jan Co-chairman and guest speaker: Second Urological Research Forum, Okinawa, Japan
March Invited Guest Speaker: Seventh Reconstructive Surgery Seminar on Organ Preservation and Function Restoration in Urologic Oncology, Erice, Sicilia, Italy
April American Urological Association Northeast Section Seminar, Montreal, Canada
May Teaching Session for Neuroprosthesis Multicenter Clinical Trials in Hannover, Germany
June Visiting Professor: Alexandria Armed Forces Hospital in Egypt
Oct Guest Speaker: IV Congress of the All-Union Association of Urology, Moscow

1991

Aug Honored Guest Speaker: International Federation for Hydrocephalus and Spina Bifida-Stockholm, Sweden
Sept Beijing International Symposium, Beijing, China
Nov SIU Congress, Seville, Spain

1992

Mar-Apr Speaker: Australia Urological Society, Adelaide, Australia
July WUF/CA Urologic Forum, Antigua, Guatemala
Aug-Sept International Continence Society Meeting, Halifax, Nova Scotia, Canada
Oct 27th Annual Meeting – Egyptian Urological Association, Alexandria, Egypt Societe Internationale D'Urologie- 10th Annual Meeting, Lille, France

1993

Jan Alexandria Armed Forces Hospital, Alexandria, Egypt
March Western Urologic Forum, Manzanillo, Mexico
June Canada Urologic Association, Montreal, Canada
Oct Postgraduate Course "Madrid 93", Madrid, Spain
Dec International Symposium of Uro-Gynecology, Sao Paulo, Brazil

Emil A. Tanagho, MD

1994

Jan "Journées de Propara," Montpellier, France
June Visiting Professor, Innsbruck, Austria
Sept Societe Internationale D'Urologie, Sydney, Australia Post-Congress Seminar in Singapore
Oct International Symposium of Pediatric and Pediatric Surgery, Madrid, Spain

1995

March Western Urologic Forum, Puerto Vallarta, Mexico
Sept German Urological Association, Hamburg, Germany
Nov 25th Brazilian Congress (speaker), Bahia, Brazil

1996

Feb. Urodynamic Meeting, Wuppertal, Germany
July Guest faculty for Behavioral and Cognitive Neurosciences (BCN) meeting, University of Groningen, Holland
August Chen Kung University Medical College, Tainan, Taipei Taiwan
Sep Guest Speaker: Operative Techniques Seminar, German Society of Urology
Dec Egyptian Society Meeting, Cairo, Egypt and Visiting Consultant at Alexandria Army Medical Center.

1997

May American Medical Association: Cutting Edge of New Advances in Medicine.
July NIH SEP meeting, Washington, DC
August International Symposium on Voiding Disorders in the Elderly Kassel, Germany
WHO Consensus Conference on Urinary Incontinence in the Elderly
Sep Urologic Research Society, Quebec, Canada and SIU meeting
October Speaker at the Thirty-second annual meeting of Egyptian Urologic Society, Alexandria, Egypt
Nov 45th Kimbrough Urologic Seminar

1998

May Watterson lecturer: Applied Neural Control in Biomedical Engineering Case Western University
Promoter for PHD Thesis on the Organization of the central control of micturition, Groningen University, Holland

Emil A. Tanagho, MD

June 1st International Consultation on Incontinence, Monaco – President.

Sept National Arab American Medical Association, Newport Beach, CA

Nov NIH SEP meeting.

1999

March International Symposium on Voiding Dysfunction, Ankara, Turkey

April Visit: Strasborg, Brussels, London, Prague and Hamburg as AUA and EAU scholarship preferred leader for 2000

June NIH Urology Study Section meeting.

July NIH Urology Study Section meeting.

2000

Sept Ghanera Armed Forces Hospital, Cairo, Egypt

October 5th Asian International Urology Seminar, Beijing, China

Societe Internationale de Urology, SIU meeting in Singapore

August Invited speaker at 5th Asian Urology Congress, Beijing China.

NATIONAL-

American Urological Association (1982-2000)

TEACHING:

Dr. Tanagho is actively involved in both undergraduate and postgraduate teaching.

UNDERGRADUATE:

Core Curriculum 110: Dr. Tanagho gives about one-fourth of this course, 8 hours and out of 32 hours. He also teaches the same course at San Francisco General Hospital for undergraduate students every eight weeks. He supervises and teaches students in clerkships during their rotation through the Urology Department.

POSTGRADUATE:

Graduate teaching for residents and housestaff. Biweekly conferences on uro-radiology for four hours each month, one conference monthly on pediatric urology for two hours, one conference monthly on physiopathology of the urinary system, a conference every

Emil A. Tanagho, MD

month on operative urology, several conferences and presentations during grand rounds, weekly teaching conferences with residents for two hours, ongoing teaching for residents and house staff and ward rounds, x-ray discussions, and teaching in operating room.

Postgraduate teaching also involves two or three research fellows on a constant basis in our urology laboratory. Over the last 19 years, Dr. Tanagho has trained the following research is:

See TEACHING – Postgraduate

OTHER TEACHING AIDS PREPARED:

The book Smith's General Urology, now in its 15th edition (1999), edited by Dr. Tanagho with Dr. Jack McAninch, also contains several chapters written by Dr. Tanagho. The anatomy and physiology of the urinary system common urogenital problems, and current advances in diagnostic and operative techniques are discussed. It is being used as a textbook for 3rd year medical students in Core Curriculum-Surgery 110.

Dr. Tanagho's book, Female Urinary Incontinence (edited with Mr. Stuart Stanton) is now in its second edition.

In 1988, Contemporary Management of Impotence and Infertility was published by Williams and Wilkins. Dr. Tanagho edited this work, along with Drs. Tom Lue and R. Dale McClure.

In 1989, Problems in Urology was published in J.B. Lippincott, edited by Dr. Tanagho and devoted to Genitourinary Pain.

TEACHING ACTIVITY SUMMARY:

Dr. Tanagho is actively involved in our teaching program. He lectures on a regular basis to our third year medical students during their Surgery 110 course, and is closely involved with the many international postgraduate fellows who request to come and work with him on research projects in our lab. He has trained a great many of them over the years. Each month Dr. Tanagho is involved in regularly-scheduled urology conferences given to the residents and housestaff. He supervises residents and housestaff in the urology clinic two days a week. He is always available to the residents for one-on-one teaching while studying and evaluating patients and he scrubs with the residents in surgery on a regular basis for extensive teaching while operating. Dr. Tanagho is highly regarded by all of them as a knowledgeable and skillful teacher and clinician. His teaching hours totalled approximately 144 hours per month and 1725 hours per year.

Dr. Tanagho's extensive research activity covers a broad base of urologic pathology. His basic work started in London (1962) at the Institute of Urology, where he elucidated the anatomical structure and physiologic function of the urethrovesical junction, bladder neck and urethra. For the first time, dissection under magnification was used to study these critical segments of the urinary tract, demonstrating beyond any doubt the course and anatomical relationships of various muscle bundles and leading to a clear understanding of their physiologic function.

This work was continued (1963) at the Department of Urology, University of California School of Medicine, San Francisco, where multilateral physiologic studies of the function of the urethrovesical junction and trigone were carried out. This was the first comprehensive study of the physiology of this vital segment of the lower urinary tract. At its completion this work became a classic and has not been disputed since. Dr. Tanagho then embarked on the study of the anatomy of the bladder neck and of the urethra, specifically of its sphincteric mechanism, applying the same basic techniques as those used for the study of the urethrovesical junction. This study revealed several important anatomical facts about the fine structure of the sphincteric mechanism, establishing the proper anatomical morphology of the urinary sphincter.

Subsequently, studies were done of the dynamics of the bladder neck and the urethral sphincteric mechanism to understand the basic physiology of micturition. Cinefluoroscopy and multiple simultaneous pressure recordings provided clear insight into the

basic mechanism of interaction between bladder and urethral sphincter. This work was followed by the development of a comprehensive means of urodynamic study for evaluation of the lower urinary tract. This method became applicable to a variety of urologic disorders and made UCSF one of the leading institutions in the world for the understanding, study and evaluation of such problems. Clinical application ensued, mainly a new surgical technique for the repair of total urinary incontinence by sphincteric reconstruction, utilizing specific segments of the bladder wall—first done in 1970. This has become the classic technique applied by many institutions for correction of total urinary incontinence, especially after prostatectomy.

Pediatric urologic problems also have been the subject of Dr. Tanagho's studies: the pathophysiology of functional ureteral obstruction (in which it was proved that the derangement is primarily muscular rather than neurogenic); peristaltic activity of the ureter and the effect of intrinsic and extrinsic autonomic innervation in relation to ureteral function; repair of epispadias and bladder exstrophy (techniques that are now accepted world-wide).

Pioneering intrauterine fetal surgery in the lab, mimicking common congenital anomalies, was developed at our institution in the early 1970s to investigate the correlation between developmental ureteral pathology and kidney function. Intrauterine ureteral obstruction was developed at the level of the ureteropelvic junction; in addition bladder outlet obstruction was initiated at midterm. These studies were followed through the animals' pregnancy until delivery, and the pathologic changes were evaluated to establish the correlation between congenital obstruction, with or without vascular ischemia, and renal development and dysplasia. The information accumulated is now the foundation for intrauterine correction of such congenital anomalies.

In the last 20 years, Dr. Tanagho's research activity has focused on the feasibility of controlling micturition by electrical stimulation of the spinal cord or the sacral roots. This work has been continuously supported by an NIH contract and then by an NIH grant (#1 R01 NS 18029). This multilateral project involves basic neurophysiologic and neuroanatomic studies.

Detailed anatomic mapping of the neural connections to the lower urinary tract and genital tract has been established by the technique of retrograde transport of horseradish peroxidase; this protein, once injected into a site, is transported along the nerve's axons to its motoneuron cells. Step by step, we were able to outline the entire neuroanatomic chain controlling micturition, as well as sexual function and lower gastrointestinal tract function. The possibility of sacral root stimulation by identifying the root and isolating the autonomic fibers from the somatic fibers, then implanting tiny electrodes around the autonomic fibers for the purpose of controlling micturition has been explored repeatedly in animals and has proved successful. From our extensive and detailed work, we have been granted permission to apply this method of induced micturition to humans. To date thirty-five such patients have been treated. Overall the success rate is about 70%.

A dividend of this neural stimulation study is the attempt to control sexual function and erection by identifying the specific autonomic nerve fibers controlling this complex mechanism and then triggering the erectile response via electrode implantation. We developed both canine and simian models in which an erection pacemaker was implanted on the cavernous nerves after they had been isolated surgically. In these animals we induced well sustained erection. In addition, we established the first chronic animal model that permits complete evaluation of erection hemodynamically as well as neurophysiologically and radiographically. Exploration of the potential application of electro-erection to man is underway.

Neural stimulation studies opened the door to the management of a large segment of urologic patients who are crippled by a variety of voiding dysfunctions, as the studies revealed that many patients who have functional voiding disorders can recover normal voiding patterns through sacral root stimulation. Percutaneous testing and temporary electrode placement permit proper assessment of those patients who might benefit from permanent implantation. This new approach has been tested in clinical studies for the FDA in many centers in the states as well as overseas and now is currently accepted and widely used. This work resulted in eight issued U.S. patents; three are currently licensed to industry for the purpose of testing and FDA approval.

Owing to the significance of the neural stimulation research, Dr. Tanagho has been the recipient of the Jacob K. Javits Neurosciences Award for the last 10 years—the only urologist to be so honored. Dr. Tanagho also has been awarded honorary membership in the Urologic Society of Czech-slovakia, the Egyptian Urologic Society, Urologic Society of Australasia, All Union Association of Urology, USSR, German Urological Association, and the Urologic Society of Japan.

Recently, Dr. Tanagho has been interested in the regenerative power of the urinary bladder as it is enhanced by an acellular matrix graft. Preliminary studies reveal that, when acellular matrix is grafted on top of the bladder base after subtotal cystectomy, this becomes completely remuscularized within 2-3 months and the regenerated tissue assumes all the characteristics of a normal bladder wall. It also attracts autonomic innervation; functional studies reveal that the regenerated bladder is essentially identical to the normal bladder in its responses and functional properties. This work is in its infancy, but it has tremendous potential for clinical

Emil A. Tanagho, MD

application—not only to augment the bladder but also to replace segments in the urethra or the ureter by accelerating the normal regenerative process. This approach, if fully successful, will revolutionize urologic reconstructive surgery.
